-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

***Claim Rejections - 35 USC § 103***

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Erickson (4,093,295) in view of Poupitch (2,997,169). Erickson discloses in the embodiment of Figure 7 an integrally molded carrier for carrying multiple containers by their necks comprising a substantially planar web (36) having multiple nodes defining multiple annular supports (30-32) with each annular support having a flexible annular flange (33-35) for releasably engaging the necks of the containers. Erickson further discloses the centers of the annular supports are substantially aligned along a common axis and a generally U-shaped handle (37) flexibly attached to the web at four points that are substantially equidistant from the centers of the multiple annular supports. Erickson also discloses the other claimed limitations except for the handle being flexibly attached to the web at two points that are substantially equidistant from the centers of the multiple annular supports. Poupitch shows a carrier (20g) for carrying multiple containers comprising a substantially planar web having multiple annular supports (22g) for engaging the containers and a generally U-shaped handle (78-82) attached to the web at two points that are substantially equidistant from the centers of the multiple annular supports. It would have been obvious to one having ordinary skill in the art in view of Poupitch to modify the handle of Erickson so the handle is attached to the web at two points that are substantially equidistant from the centers of the multiple annular supports to facilitate carrying.
